

## detox™

Effectively removes  
**chlorine** from your  
pond or indoor aquarium

As all fishkeepers know, it is **necessary** to remove **chlorine** and other impurities from tap water when introducing it to a pond or aquarium. Failure to do this can result in fish health problems and it also adversely affects the growth of beneficial bacteria in all filters. The most common method of **de-chlorination** is to add chemical treatments to break down the chlorine.

This method is costly and can require accurate measurement of the amount of water to be treated. The **De-Tox de-chlorinator** simply connects in-line to a hose pipe with standard hose fittings (supplied). The De-Tox carbon filter removes the toxins in tap water prior to it coming into contact with your fish and filters.

De-chlorinators are available in 12 inch 30 inch.

Model	Max Flow Rate	Treats up to
De-chlorinator FC - 12" Filter  CODE = <b>FC12</b>	4.5 litres/min 1 UK gallons/min 1.2 US gallons/min	150,000 litres 33,000 UK gallons 39,000 US gallons
De-chlorinator FC - 30" Filter  CODE = <b>FC30</b>	9 litres/min 2 UK gallons/min 2.4 US gallons/min	350,000 litres 76,922 UK gallons 92,470 US gallons
